An Introduction

Composite door in black

Nether Green Showroom, Oakbrook Road

First impressions count - and when it comes to your home this has never been truer than in the case of a front door. Whether you want to improve your home security, replace a draughty or outdated timber door or simply achieve that much sought after 'kerb appeal', Sheffield Window Centre can offer you the perfect solution for your home.

We have a vast range of uPVC, Aluminium and composite styles to choose from - available in a huge choice of colours and designs. They all offer outstanding thermal efficiency and are low maintenance, with the highest levels of security.

From our factory in the heart of Sheffield, we supply and fit uPVC panel or composite entrance doors, as well as bi-folding, French and patio doors made from either uPVC or Aluminium.

We can help you to choose the style, colour and accessory combination to match both your property and your budget; and we can advise you on all the important details such as low threshold options. Our special glass design service means you can even choose to make your door totally unique and original with bespoke personalised glazing.

Managing Director, Ian Hunter and son Ian

High security handle

The weight of a Mini being applied to one of our uPVC doors

We know just how important **security** is when choosing a new door for your home. Therefore, every one of our doors has unique security features, which are tested to the extreme and out-perform anything we've seen elsewhere. These include the very best locking systems, cylinders and security handles to resist both the opportunist and the more determined burglar. Our aim is to make your home safe and secure, whilst not compromising on design, style, or thermal efficiency.

As standard, all of our entrance doors feature a multi-point door lock with hooks, opposing roller cams and deadbolts. In addition, we always fit high security door cylinders, which are proven to resist the growing threat of lock bumping, picking, drilling and snapping.

For maximum protection against intruders, every door installed by Sheffield Window Centre is fitted with a high security handle. These handles have patented features that make forced entry almost impossible, and when fitted in conjunction with our security cylinders, we can say with confidence that our doors give you total peace of mind.

Door security features being installed in our factory

Our **Composite Doors** are manufactured from thermoset GRP (Glass Reinforced Polyester) and are compression moulded to give a high-definition panel design with the character of timber due to the renowned oak tree woodgrain finish. The stiles and rails are composed of water-resistant polymer which is bonded to the skin and filled with an insulating core of 100% CFC-free polyurethane.

When it comes to thermally efficient front doors, our GRP composite door is the best choice you can make! Our Signature composite door (44.5mm) has been independently tested against a solid timber core composite door (48mm) and a traditional timber panelled door (44mm). The results prove that our composite door is more than 17%+ more thermally efficient than both of these alternative doors.

All of our doors are manufactured to the highest of standards and built to stand the test of time. The door's durability is reflected by the comprehensive structural and surface warranty that we offer with all of our products. Plus, with over 100 door styles, unlimited colours and our triple glazed, laminated or toughened glass design range to choose from you can create a bespoke composite door that is truly unique to your home.

Our **uPVC Panel Residential Doors** in REHAU outer frames are also thermally efficient, strong, durable, and require very little maintenance. Each of our doors is fully reinforced both in the frame and in the panel, giving you complete confidence in how this type of door will perform long into the future.

A wide variety of styles and colours are available. We've given you some ideas here but we have many more design options available – please enquire for more details.

This contemporary design choice can create a stunning full width opening allowing you to open up your house to the garden as never before, perfect for summer days and providing space for entertaining.

Made from premium-grade aluminium, our **Bi-Folding Doors** are secure, virtually maintenance free, energy efficient and highly durable. They boast finger-safe gaskets to stop little fingers getting trapped when the doors are closing and strong magnetic catches that hold the doors in place when it's windy outside. The doors are also resilient to the elements, so the frames won't expand, warp or corrode in varying weather conditions.

They are available in a variety of colours and finishes, opening from the left, right or from the middle. The options are virtually endless so we can make sure you get the perfect solution for your home.

Our **French Doors** are an ideal solution for providing access to your patio or garden, transforming any opening into a beautiful entrance that is both practical and secure. The doors can either open outwards or inwards, depending on the layout of your home and can also be used to provide excellent ventilation or form part of a Juliette balcony.

Just like our entrance doors, all our French doors come with a high security locking mechanism, high security handles and cylinders that are anti-bump, anti-pick, anti-drill and anti-snap, making the rear of your home as secure as the front.

Inline Sliding Patio Doors

Our **Inline Sliding Patio Doors** are the most cost effective way of providing access to your patio or garden. They slide open smoothly to one side, with no sticking or jamming thanks to our easy glide stainless steel track and rollers.

They are also very secure with hook bolts that lock into a one piece steel keep plate.

Similar in style to our inline sliding patio doors, our **Tilt and Slide Patio Doors** also slide smoothly and effortlessly to one side, but have an added tilt feature, which means they can be used to provide extra ventilation without needing to open the doors fully.

These doors are also very secure and feature an all round locking mechanism with shootbolts and an internal handle. An external handle can also be added if required.

All of our doors are made-to-measure and with so many designs, colours and finishes to choose from, the possibilities are endless! The following pages show a selection of doors we have manufactured in the past to give you some ideas and inspiration.

uPVC French doors with midrail and plain panels to lower section

White French doors with gold handles and Georgian fret

White French doors with white handles and Georgian fret

Once you have chosen your new door, it's important to also select the right accessories as a finishing touch, to really make it stand out. Choose from a wide range of **door accessory** options to suit your taste and individual requirements.

Accessory options available include letterboxes, security handles, door knockers and numbers, in a range of colours and finishes including black, white, gold, chrome, bronze and graphite. We also offer door security chains and spy holes to ensure piece of mind when answering the door. Please contact us or visit one of our showrooms for a complete list of door accessory options.

Replacing your old front door with a more energy efficient alternative doesn't mean that you have to lose any beautiful existing stained glass or compromise the character of your home in any way. It is possible for us to retain existing **stained glass** by encapsulating your original stained glass inside a double glazed unit, effectively making it triple glazed.

We are one of the only double glazing companies in the UK to employ in-house specialists dedicated to the restoration and enhancement of original stained glass. With over 30 years experience in this delicate art, we can offer you a unique and totally bespoke service.

If you wish to retain your original stained glass, or even have some made in the traditional way to fit into your new door, we will be happy

to advise you. We also produce a wide range of copy-stains, bevels, and etched glass designs - all hand made to suit your individual requirements by Amy and Samantha Hunter.

Our separate stained glass brochure shows a range of our designs, from traditional stained glass replacements, etched glass designs, square and diamond leaded glass to internal and external Georgian bar designs.

To request a copy, have an informal chat or make an appointment to look round our glass studio, contact Amy or Samantha at our **Rockingham Street Showroom Glass Studio** from Monday to Friday between 9.30am and 5.00pm on **0114 281 3434**.
